

Metal die-casting

Competence with metal

Experience – and how to deal with it

Swiss quality as a starting point

- 1933 Founding of Metallgarnitur GmbH, in St.Gallen-Winkeln
- 1948 Relocation to Mooswiesstrasse, Gossau SG
- 1979 Extension of production facilities
- 1987 Company name changed to MEGA GOSSAU AG
- 1991 Partial relocation of production to Langfeldstrasse, construction of Langfeld I
- 1999 Construction of Langfeld II and relocation of all production facilities in one place

When we recommend a solution to one of our customers, we base this on many decades of experience.

Our first die-cast part was an item of door hardware made of red bronze, manufactured using the sand casting method.

Nowadays, using high-tech equipment, zinc and aluminium are cast, processed and finished. Materials and manufacturing procedures have changed, but we have retained all our experience from the early days right up to the present day.

"It is not enough to know, one must also apply;
it is not enough to want, one must also do."
Johann Wolfgang von Goethe

Something that started in 1933 with the founding of a hardware factory called Metallgarnitur GmbH, has developed over the decades to become MEGA GOSSAU AG: Switzerland's specialist in die-casting and market leader in customised metal solutions and builders hardware production. With a workforce of 150, many representatives and references around the world.

Know-how and how you benefit from it

On track for the
Metal die-casting for today and tomorrow

future

The world has changed. Something that would have been regarded as an innovation just a few years ago, is today regarded as standard. And in the coming years as well, companies will be required to create their futures in ever reducing cycles, based on reliable foundation pillars. And this is a challenge we have always been glad to face up to.

MEGA GOSSAU AG as Swiss market leader in zinc die-casting, stands for reliable, top quality work. By employing innovative thinking and flexible handling, we are able to fulfil new market requirements punctually and will always be in a position to capture new markets in the future. Continuous investment in the latest production, environmental and controlling technologies, along with specifically-directed precision handiwork, have enabled us to become one of the leading international specialists in the field of metal die-casting.

It is only possible to build up and maintain standards like these if everybody has a common goal and is true to a common philosophy. Therefore, both encouraging and challenging our staff, as well as independent working, are important foundations of our success. Working together, we are constantly striving to remain Europe's technological leaders in the field of zinc die-casting. Responsibility for people, products and the environment is also expressed in the careful way in which we handle resources. Our ecological and economic recycling and waste water cleaning equipment are fine examples of this.

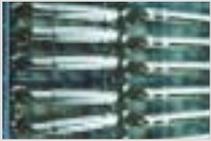

We aim for a relationship with our customers which ensures a long-lasting business partnership. Thanks to innovations and simple processes, we create added value and therefore increase your competitive edge.

A wealth of new

possibilities

Versatility – Individuality – Design – Quality

As far as our metalworking services are concerned, it is basically a question of mastering the interplay between design engineering, raw materials, processing and finishing - and creating more and more appropriate solutions and answers for new products and to suit ever-changing living conditions.

MEGA GOSSAU AG was one of the first suppliers to recognise the enormous application potential for metal parts manufactured using a die-casting process and formed two company divisions relating to this:

individual, customer-specific metal die-casting solutions, as well as door and window hardware. Working on our own, or with well-known designers, we create fittings made of zinc, aluminium and brass, absorb contemporary trends and pay attention to shape, colour, function and attractive surface finishes, as well as ensuring parts are easy to grip.

Our skilled personnel are available for individual consulting as regards metal solutions, and are able to discuss design, materials, toolmaking, die-casting, processing, grinding, polishing and surface treatment. In order to make sure that all metal parts can be perfectly and seamlessly integrated into an existing environment, all products are precision manufactured on the latest equipment, carefully finished and strictly inspected. In this way, we are able to guarantee technical excellence, a high level of functionality and the best possible benefit for the customer.

Whether business-to-business - from apparatus and machine construction to electronics and measurement and control technology - or the lock and hardware sector, there is one factor that binds all of our customers: they deliberately choose MEGA products and solutions. They have realised that, thanks to quality products and reliable outsourcing of metal parts - from the idea to the finished part - time and cost advantages can be turned into a reality.

We think of ourselves as consultants, who respond to your special requirements.

Your success is our success

The secret of success is understanding the viewpoint of the other person.
